Epsilon
Visitors & Gate Pass Management

Record, Control and Authorize Your Enterprise

Epsilon - Visitors & Gate Pass Management

Epsilon Visitors & Gate Pass management is a comprehensive security management application for large and medium organizations having multiple entry points where visitors are required to be authorized by the staff before gaining entry into the premises.

While creating the gate pass, all the missing data from the master database is asked for entry. So if an employee enters inadequate information about a visitor, the security person can complete the same when he meets the visitor. The security person will have to take the photograph of the person for his first visit but for subsequent visits, the data including the photograph can be picked up from the database.

The gate pass can be printed in various formats and user can even customize the gate pass for his needs. It provides comprehensive, enterprise - class visitor registration, tracking, reporting and badge printing, as well as web-based pre-registration and access control.

Technology Used

Epsilon is a centralized web application developed using ASP.NET 4.0, C#, Sliver Light, WCF and MSSQL.

Industry Segment

Versatile application that can be deployed across all large and medium commercial and industrial establishments.
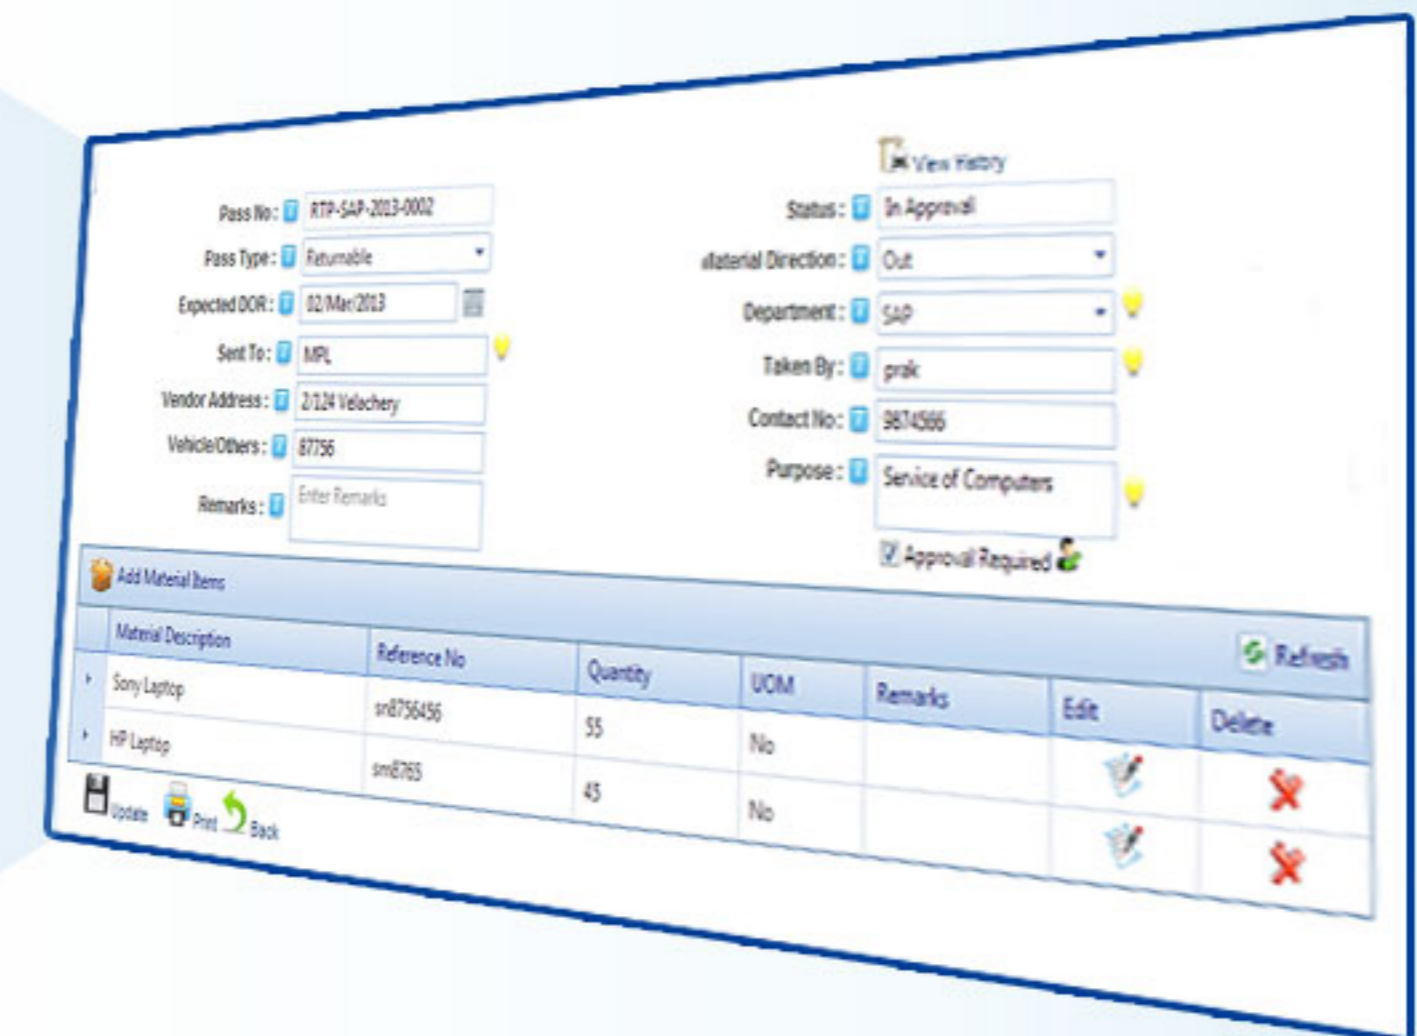

Features
